From daily meetings to global summits,
Saydi captures every nuance in real-time

Saydi AI: Context-Aware Real-Time Voice Translation

Breaking language barriers with real-time, context-aware AI interpretation

 Saydi AI team •  Sotatek •  hello@saydi.ai

I. INTRODUCTION

The Challenge

Language barriers do more than slow communication, they can change meaning

In international meetings, conferences, sales conversations and cross-border collaboration, accurate translation requires more than converting words from one language to another. Context, terminology, speaker identity and conversational flow all matter.

The Approach

Saydi AI is a real-time voice translation platform designed to preserve meaning across languages. It combines real-time speech processing with contextual AI to help people communicate naturally across meetings, events and everyday interactions.
